overview

make me dugouts supply square framed team shelters and football dugouts that offer a full customisation service. from vinyl covered cladding to corporate branded sponsorship logos, messages and panels, we can design and manufacture a square football dugout to meet your requirements. standard square frame module details are as follows:

- 1950mm H x 1250mm D x 500mm per person
- 5mm thick clear PetG cladding on Premium square frame dugouts
- welded end caps for a high quality finish – no plastic bungs
- galvanised mild steel box section frame (50mm x 50mm) rust resistant finish*
- framework can be powder coated using standard RAL colours
- optional high grade stainless steel framework - contact us for details
- all square football dugouts are available as standalone or include our vast range of seating styles
- range of optional extras including vinyl's and padded crossbars
- football dugouts can be portable or bespoke designed to create disabled spectator canopies
- orders are despatched flat packed with assembly instructions and pre-drilled framework
- full onsite installation service available

modular system

your dugouts can expand with you...

our dugout modular construction means square framed dugouts can have modules 'added-on' or retro-fitted with module extensions at a later date meaning therefore as you climb up the leagues your team shelter can grow with you whilst keeping the costs low.

if you're looking to replace your existing technical area sports dugouts or tendering for a new stadium build with in-stand football dugouts, we're here to help.

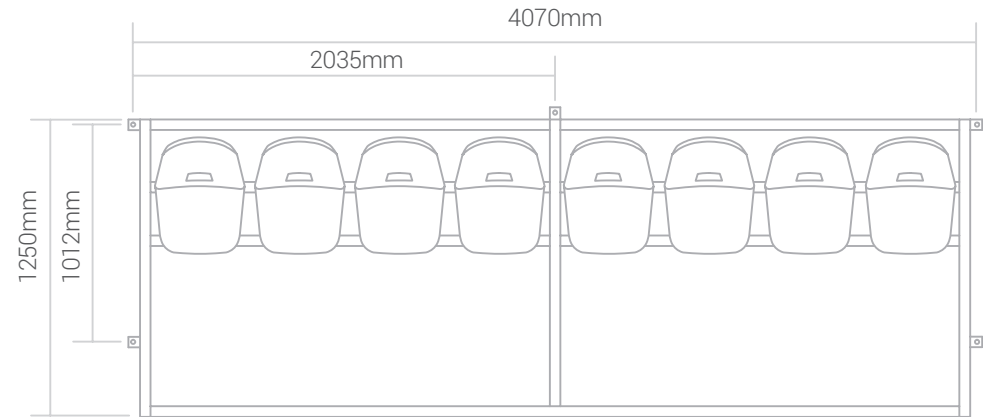

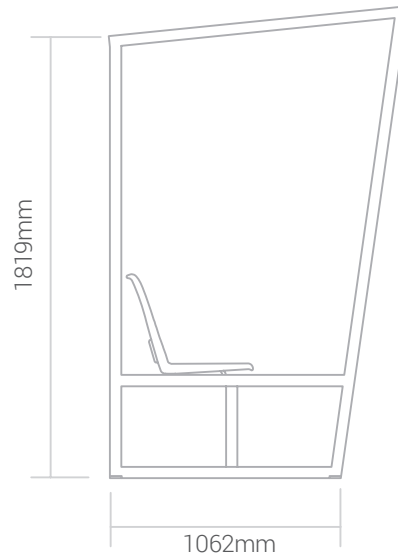

dimensions

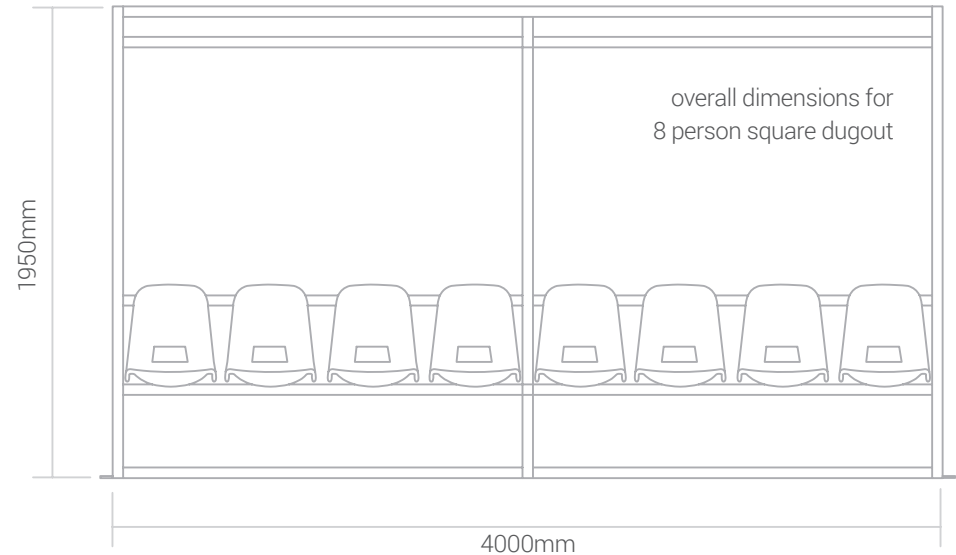

our square football team shelters and sports dugouts can be manufactured to any size requirement and style to suit your needs, however we do supply three 'standard' size options based on our 2 metre modules to suit the most frequently requested sizes:

- 4 person / 2000mm W
- 8 person / 4000mm W
- 12 person / 6000mm W

our standard space allowance is for 500mm per player, unless high-end seating such as Recaro or Cobra seats are being used. Our bench seating allows for an extra person due to the fact it runs the full width of the dugout frame and is solid and not slatted for comfort.

fixing tab positions for 8 person square dugout

choose your finish

we use 50mm x 50mm mild steel box section to manufacture our standard dugouts, we can however adapt to suit specific requirements. our main finishes for our dugouts are as follows; galvanised only, galvanised and powder coated or brushed stainless steel. all 3 finishes have their pros & cons and associated costs.

galvanised only

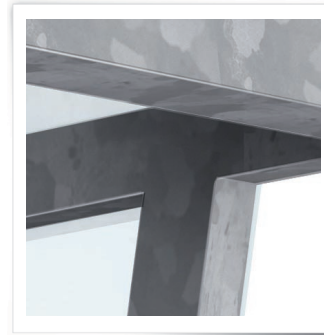

- increased corrosion protection – we prefer not to supply any dugout frame without this
- minimal maintenance required
- 10 year guarantee offered with this finish

powder coated and galvanised

- increased corrosion protection
- minimal maintenance required, easy clean finish
- 10 year guarantee offered with this finish
- large range of colours available, we can also colour match for additional cost

brushed stainless steel

- weather resistant finish
- high end finish
- rust resistant

galvanised

extremely durable finish with a corrosion resistant zinc coating to BSEN1461. High levels of impact resistance and abrasion with a 10 year corrosion warranty.

galvanised & powder coated

powder coating is applied in addition to the galvanised finish and is available in a variety of RAL colours to match your clubs colours in accordance to BS3900.

brushed stainless steel

high end weather resistant finish using 316-grade stainless steel.

choose your seating

we can supply your dugout with a large range of seats for both standard stock square framed dugouts or bespoke designed shelters. different styles of seats enable different amounts of players within the dugout according to the seat centres, in general we allow for 500mm per person.

various seats have different styles and options with the choice of personalisation using screen printing or embroidery; we can supply 3D visuals prior to ordering so you can see the chosen seats in place within the chosen dugout frame.

some of the seat styles available for use within our dugouts are independently fixed to the dugout framework enabling upgrades as you climb the leagues (see our modular system page for details on adding extended sections to dugouts).

bench

12mm thick solid textured plastic bench available in various colours

moulded seats

cost effective seating solution available in a range of colours

BS premium tip-up

range of colours with various customisation options, club/ sponsor logo options

SS1 customised sports seat

high quality finish with multiple colour options and club/ sponsor logo options

individual moulded bench

moulded plastic shells available in a variety of colours

SA tip-up

available in a range of colours to suit your club branding

SC padded tip-up

padded tip-up seat, with choice of colours and club/ sponsor logo options

SS2 customised sports seat

high quality finish with multiple colour options and club/ sponsor logo options

choose your extras

we supply a range of optional extras to help customise your square framed dugout or team shelter.

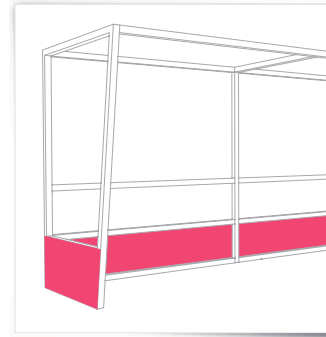

our sponsorship panels allow you to display logos and sponsor messages or HOME and AWAY vinyl's, particularly good for helping get funding. our in-house design service means we can provide you with 3D visuals to show the layout prior to ordering.

low level mild steel cladding offers additional protection to the dugouts from impact, this can be particular useful for hockey dugouts due to the nature of the ball used during play.

our design service gives you the option to add vinyl's to your dugout framework and clear cladding. We can supply full vinyl wraps for product for kit launches, club logos, low level vinyl panels for helping enhance club or sponsors branding and and HOME or AWAY vinyl's for the front crossbar.

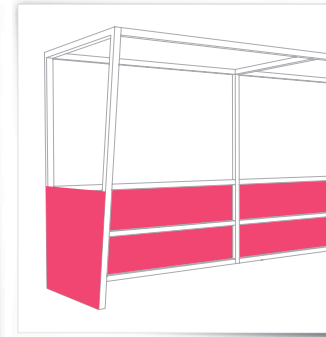

padded vinyl's fix to the front crossbar and side uprights and are a great addition to any dugout, ideal for sponsor logos and to help enhance club colours. These can be ordered at the same time as your football dugout order or at a later date.

we despatch our dugouts with fixings for concrete as standard however we can supply fixings for most surfaces, just let us know what surface they are to be installed onto. ground anchors are particularly well suited for grass, allowing dugouts to be repositioned, we can also offer anchors for alternative surfaces. for portable dugouts on wheels please see our portable dugout section.

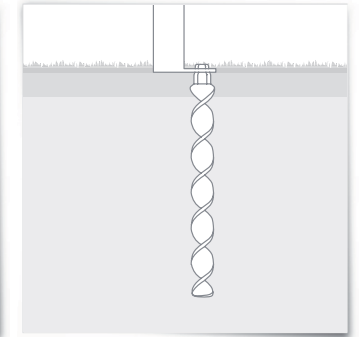

low level cladding

suitable for hockey dugouts for extra protection.

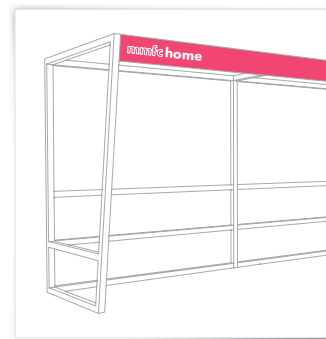

high level cladding

suitable for hockey dugouts for additional extra protection.

ground anchors

securely fixes the dugout to grass surfaces.

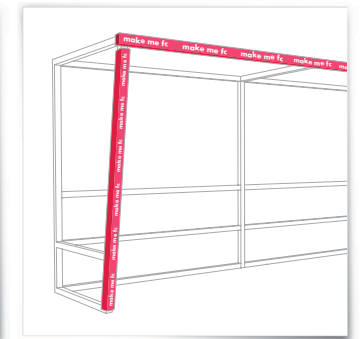

sponsor panel

an additional steel panel secures along the front of the dugout for vinyls and messages.

vinyls

club logos, sponsorship logos or anything you can think of, all applied prior to delivery.

padded vinyls

great for club and sponsor logos and protects the frame edges and players heads from knocks!

lancaster university

we have provided several sets of dugouts to Lancaster University over the years. initially we supplied full powder coated black square framed dugouts to reflect the university colours with full size branded logos with the university motif. Installation was carried out by our on-site installation team directly into both the tarmac surround and directly into the astroturf pitch.

we then supplied additional dugouts in the same 8/9 person square framed sports shelter design but in a galvanised only finish.

more recently, we supplied a shallower depth dugout with galvanised frame and bench seats to suit existing fencing around a current 3G/astro pitch.
